

Felgenreiniger K viskos

Rim & stainless steel cleaner, acidic, viscous

Heavily phosphoric acid based cleaner for all acid-resistant materials (rims, stainless steel surfaces, etc.). Brake dusts and other inorganic dirt such as limescale are removed quickly and thoroughly. The highly viscous setting leads to long adhesion and thus long interaction on the surfaces and reduces aerosol formation (safe working). A special additive delays drying and corrosion inhibitors reduce corrosion of the brake callipers.

page 1 of 1

Areas of use

Acid-resistant materials such as painted aluminium and steel rims, stainless steel surfaces, etc.

Recommendations for use

Depending on the dirt accumulation, apply a 1:2 to 1:10 solution to the rinsed areas from bottom to top (avoid running). Allow to react for a short time, if required finish with sponge or brush, and rinse off thoroughly with a high-pressure appliance. Where necessary, buff stainless steel surfaces.

Container
