

KocFloc spezial

Special flocculant. The highly concentrated flocculant and precipitant based on basic aluminium chloride with polymer for use in industrial water treatment and waste water treatment plants. The polymer contained leads to faster sedimentation of suspended matter and thus to accelerated clarification. The finest dirt particles combine to form large flakes and are removed from the waste water by precipitation (sedimentation in the sludge trap) and/or filtration.

Not suitable for use in biological process water treatment plants.

Areas of use

Wastewater treatment plants and conventional service water treatment plants.

Recommendations for use

Add to the first sludge trap/settling basin via dosing pump or manually during operation.
Dosage: daily 30-60 ml per m³ of service water or in car washes approx. 20 ml per car.
Optimum effect in the pH value range (service water) 7 to 8.

Container

Container	Item no.
25 KG	292025

pH-value: 1,4

Warnings

Do not use in biological service water treatment plants.;Before using, check suitability and compatibility.;
